

NAME:

STUDENT ID:

Remember to also initial in the upper right-hand header of each page.

Project 2: Rock Paper Scissors (Demo prep)

Rubric

	Meeting/exceeding expectations (full points)	Arriving at expectations (partial points)	Not meeting Expectations (Low or no points)
Programs (2 pts)	All programs are correct (1 pt)	All programs run, some programs are correct (.5 pt)	Program(s) don't run or fewer than half of programs are correct
	Programs are logical and organized (.5 pt)	Programs are logical or organized (.3 pt)	Programs are neither logical nor organized
	Clear headers and in-line comments (.5 pt)	Either clear headers or good in-line comments (.3 pt)	All comments are lacking clarity
Demo (3 pts)	Answers all questions thoroughly, clearly understands their program(s) (1 pt)	Answers most questions thoroughly but required prompting (.75 pt)	Can not explain all or part of the program(s)
	Responds to follow-up questions with accurate and clear answers (1 pt)	Responds to follow-up questions but cannot carry out a conversation (.75 pt)	Cannot demonstrate understanding
	Student identified what their biggest challenge was and how they overcame it. (1 pt)	Student identified areas for improvement but lacked specificity. (.75 pt)	Reflection lacked consideration.

Elaboration on terms

- Correctness: programs do what the problems require.
- Program logic: use variables and functions where appropriate
- Comments: there should be a header comment that includes the author's name and describes the program's purpose. Comments in the code should clarify how the program works.
- Organization: whitespace indicates the logical structure of the code, order elements properly.
- Understanding: program should be explainable.
- Reflection: identify the challenges of the process and how they were addressed.

Demonstration Instructions

- confirm availability for a 10 minute [time slot](#)
- submit all your code to gradescope
- bring printed versions of your code
- be prepared to run your programs on a lab machine, downloaded from gradescope
- program & file list:

1. `rps_1.py`
2. `rps_2.py`

and 2 of the following

3. `rps_cheating.py`
4. `rps_anti_human.py`
5. `rps_human_like.py`
6. `rps_five.py`

Further prepare for the demo by answering the following questions

Bring your written answers with you as your only allowed notes, they will also be collected.

1. How did you fill in the body of your `rps` function?
 - what coding constructs did you use to direct the program's flow of execution?
 - what, if any, conditional statements did you use?
 - how did you determine who won?

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

2. In `rps_2.py`, when playing the game, do you expect the user or computer to win?

- which lines of your program make you believe your prediction?
- how could you demonstrate that your program works as intended to a user?

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

3. In the first variation you chose, when playing the game, do you expect the user or computer to win?

- what variation did you choose? why did it interest you?
- which lines of your program make you believe your prediction?
- how could you demonstrate that your program works as intended to a user?

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

4. In the second variation you chose, when playing the game, do you expect the user or computer to win?

- what variation did you choose? why did it interest you?
- which lines of your program make you believe your prediction?
- how could you demonstrate that your program works as intended to a user?

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

5. What was the most challenging part of the project?

- did you go through multiple iterations of trying to get a part to work?
- what hint would you give to someone else attempting this project?
- what would you do differently next time?

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....
