Remember to also initial in the upper right-hand header of each page.

Project 3: Wordle (Demo prep)

Rubric

	Meeting/exceeding expectations (full points)	Arriving at expectations (partial points)	Not meeting Expectations (Low or no points)
Programs (2 pts)	All programs are correct (1 pt)	All programs run, some programs are correct (.5 pt)	Program(s) don't run or fewer than half of programs are correct
	Programs are logical and organized (.5 pt)	Programs are logical or organized (.3 pt)	Programs are neither logical nor organized
	Clear headers and in-line comments (.5 pt)	Either clear headers or good in-line comments (.3 pt)	All comments are lacking clarity
Demo (3 pts)	Answers all questions thoroughly, clearly understands their program(s) (1 pt)	Answers most questions thoroughly but required prompting (.75 pt)	Can not explain all or part of the program(s)
	Responds to follow-up questions with accurate and clear answers (1 pt)	Responds to follow-up questions but cannot carry out a conversation (.75 pt)	Cannot demonstrate understanding
	Student identified what their biggest challenge was and how they overcame it. (1 pt)	Student identified areas for improvement but lacked specificity. (.75 pt)	Reflection lacked consideration.

Elaboration on terms

- Correctness: programs do what the problems require.
- Program logic: use variables and functionswhere appropriate
- Comments: there should be a header comment that includes the author's name and describes the program's purpose. Comments in the code should clarify how the program works.
- Organization: whitespace indicates the logical structure of the code, order elements properly.
- Understanding: program should be explainable.
- Reflection: idenitify the challenges of the porcess and how they were addressed.

Demonstration Instructions

- confirm availability for a 10 minute time slot
- submit all your code to gradescope
- bring printed versions of your code & reflection
- be prepared to run your porgrams on a lab machine, downloaded from gradescope
- program & file list:

1. `base_wordle.py`
2. `random_wordle.py`
3. `learning_wordle.py`
4. `wordle_reflection.pdf`

GD Notes during demo (leave blank):

NAME:

Prepare for the demo by answering the following questions. Bring your written aswers with you as your only alowed notes, they will also be collected. Come prepared to *drive* this demonstration rather than just respond to questions.

1. How did you determine if the user guessed the correct word?
    - what coding constructs did you use to direct the program's flow of execution?
    - what data types did you use?

.....

.....

.....

.....

.....

.....

.....

2. How did you get `wordle` to learn?
    - how could you demonstrate that your program works as intended to a user?

.....

.....

.....

.....

.....

.....

.....

3. Is there a limit to how much your version of `wordle` **can** learn?
    - what are some limitations?
    - do modern/commercial versions of games share these limitations?
    - without knowing how to implement (yet), can you think of a way to overcome them?

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

4. Based on your experience writing this code, what is your guess as to how ChatGPT works?

    - does this update your answer to "Can computers think?"
    - summarize your written reflection, highlighting what you think is the most pertinant part
    - remember how quickly demos go by, what do you want to make sure to tell me?

.....

.....

.....

.....

.....

.....

.....

.....

5. What was the most challenging part of the project?

    - did you go through multiple iterations of trying to get a part to work?
    - what hint would you give to someone else attempting this project?
    - what would you do differently next time?

.....

.....

.....

.....

.....

.....

.....

.....

.....
