Project 4: Sentiment Analysis (Demo prep)

Rubric

	Meeting/exceeding expectations (full points)	Arriving at expectations (partial points)	Not meeting Expectations (Low or no points)
Programs (2 pts)	All programs are correct (1 pt)	All programs run, some programs are correct (.5 pt)	Program(s) don't run or fewer than half of programs are correct
	Programs are logical and organized (.5 pt)	Programs are logical or organized (.3 pt)	Programs are neither logical nor organized
	Clear headers and in-line comments (.5 pt)	Either clear headers or good in-line comments (.3 pt)	All comments are lacking clarity
Demo (3 pts)	Answers all questions thoroughly, clearly understands their program(s) (1 pt)	Answers most questions thoroughly but required prompting (.75 pt)	Can not explain all or part of the program(s)
	Responds to follow-up questions with accurate and clear answers (1 pt)	Responds to follow-up questions but cannot carry out a conversation (.75 pt)	Cannot demonstrate understanding
	Student identified what their biggest challenge was and how they overcame it. (1 pt)	Student identified areas for improvement but lacked specificity. (.75 pt)	Reflection lacked consideration.

Elaboration on terms

- Correctness: programs do what the problems require.
- Program logic: use variables and functionswhere appropriate
- Comments: there should be a header comment that includes the author's name and describes the program's purpose. Comments in the code should clarify how the program works.
- Organization: whitespace indicates the logical structure of the code, order elements properly.
- Understanding: program should be explainable.
- Reflection: idenitify the challenges of the porcess and how they were addressed.

Demonstration Instructions

- confirm availability for a **5** minute time slot
- submit all your code to gradescope
- bring printed versions of your code & reflection
- be prepared to run your porgrams on a lab machine, downloaded from gradescope
- program & file list:

1. `sentiment_analysis.py`
2. `reflection.pdf`

GD Notes during demo (leave blank):

NAME:

Come prepared to *drive* this demonstration *in class*. Prepare for the demo by answering the following questions. Bring your written aswers with you, they will also be collected.

1. How did you predict sentiment scores for movie reviews?

    - what coding constructs and data types did you use?
    - were your predictions perfectly accurate? why or why not?

.....

.....

.....

.....

.....

.....

.....

2. How did you *classify* reviews?

    - what coding constructs and data types did you use?
    - were your classifications more or less useful than "raw" predicted scores? why?
    - how could you demonstrate that your program works as intended to a user?

.....

.....

.....

.....

.....

.....

.....

3. How were you able to fine-tune your system?

    - what was your highest accuracy achieved?
    - was your final version more accurate than your initial version?
    - be prepared to add these numbers to a class-wide plot/graph

.....

.....

.....

.....

.....

4. Can computers think? What are some strengths and weaknesses of the method we used to simulate intelligent behavior in this project?

    - highlight a passage from your reflection to share with the class

5. What was the most challenging part of the project?

    - did you go through multiple iterations of trying to get a part to work?
    - what hint would you give to someone else attempting this project?
    - what would you do differently next time?
