Project 1: Drawings with Turtle (Demo prep)

Rubric

	Meeting/exceeding expectations (full points)	Arriving at expectations (partial points)	Not meeting Expectations (Low or no points)
Programs (2 pts)	All programs are correct (1 pt)	All programs run, some programs are correct (.5 pt)	Program(s) don't run or fewer than half of programs are correct
	Programs are logical and organized (.5 pt)	Programs are logical or organized (.3 pt)	Programs are neither logical nor organized
	Clear headers and in-line comments (.5 pt)	Either clear headers or good in-line comments (.3 pt)	All comments are lacking clarity
Demo (3 pts)	Answers all questions thoroughly, clearly understands their program(s) (1 pt)	Answers most questions thoroughly but required prompting (.75 pt)	Can not explain all or part of the program(s)
	Responds to follow-up questions with accurate and clear answers (1 pt)	Responds to follow-up questions but cannot carry out a conversation (.5 pt)	Cannot demonstrate understanding
	Student identified what their biggest challenge was and how they overcame it. (1 pt)	Student identified areas for improvement but lacked specificity. (.5 pt)	Reflection lacked consideration.

Elaboration on terms

- Correctness: programs do what the problems require.
- Program logic: use variables and functions where appropriate
- Comments: there should be a header comment that includes the author's name and describes the program's purpose. Comments in the code should clarify how the program works.
- Organization: whitespace indicates the logical structure of the code, order elements properly.
- Understanding: program should be explainable.
- Reflection: identify the challenges of the process and how they were addressed.

Demonstration Instructions

- confirm availability for a 10 minute [time slot](#)
- submit all your code to gradescope
- bring printed versions of your code **and generated images**
- program & file list:

1. square.py
2. rectangle.py
3. circle.py
4. triangle.py
5. turtle_shapes.py
6. my_picture.py
7. five_random_numbers.py
8. computer_art.py
9. my_picture.png
10. computer_art.png

Prepare for the demo by answering the following questions

Bring your written answers with you as your only allowed notes, they will also be collected.

1. How did you fill in the bodies of the shape functions?

- what python/turtle functions did you use?
- what, if any, variables did you use (beyond the parameters specified)?

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

2. What additional functions did you define?

- what are their names?
- what, if any, parameters do they take?
- what did you use them for?
- how many times did you use each?

.....

3. What variables did you define?

- what are their names?
- what type of values do they hold?
- what are their purposes?
- how many times did you use them?
- do they get re-assigned?

4. What will your drawing show when it is run?

- what is the main subject?
- what other details should I look out for?

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

5. What was the most challenging part of the project?

- did you go through multiple iterations of trying to get a part to work?
- what hint would you give to someone else attempting this project?
- what would you do differently next time?

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....

.....
